

Public messages, execution rules, and welfare

Discovery, execution intervention, and prospective message comparison in the same economy.

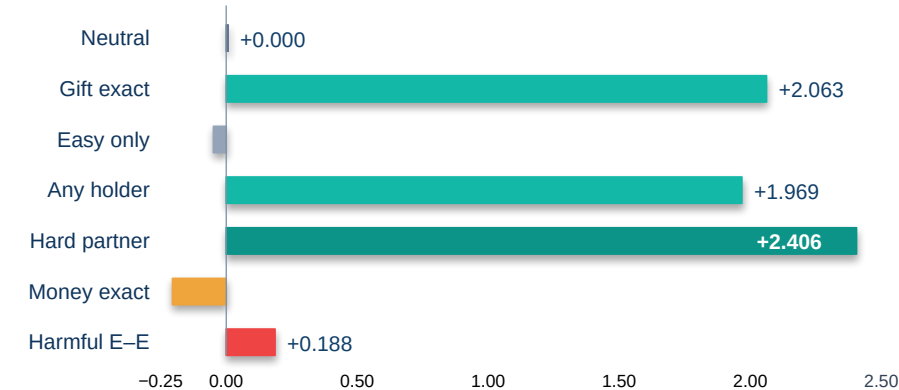

A H–H check circulation by public-message package

Mean seed-level H–H swap rate; n=14 paired population runs.

B Welfare change relative to no-recommendation neutral

Mean paired score difference; bars are descriptive arm summaries.

Manipulation check: harmful E–E swaps execute in 113/114 meetings. Exact money has no executed named sales.

Interpretation: engagement, execution, and welfare are distinct. Easy-only does not isolate actor-exclusivity semantics.
